JOURNAL OF ENVIRONMENTAL ENGINEERING (Transactions of AIJ)

October 2005 Number 596

Ignition temperature of combustible materials under radiant heating conditions
Measurements of ignition temperature using cone calorimeter
Tsutomu NAGAOKA, Makoto TSUJIMOTO and Shiego UEHARA 1

The thermal environment and energy consumption of the indoor of a light-gauge steel framed residential house with external thermal insulation structure (Part 2) evaluation in a temperate region and the potential for further energy savings
Yoshimitsu MURAHASHI, Kenzo SUZUKI, Yutaka TONOAKA and Yoshifumi SAKUMOTO 7

Study on evaluation of light environment considering biological rhythm
Mayu KUBOTA and Toshiie IWATA 15

Study on effect of opening area ratio and relative opening location on air flow characteristics in cross-ventilation models
Kyoaki HIYAMA, Shinan KATO, Takeo TAKAHASHI and Ryohel KONO 21

Studies on performance of domestic air cleaners for indoor air pollutants and prediction of indoor concentration (part 2) The removal effectiveness in airborne pollen
Hiromi KIYOSAWA, Atsuo NOZAKI and Susumu YOSHIZAWA 29

Development of flat-plate test chamber and measurement of mass accommodation coefficient of ozone
Kazuhide ITO and Shinan KATO 37

Development of test method about suppressive effect of adsorptive building materials for formaldehyde emitting material
Yui ATAKA, Shinan KATO, Joagho SEO and Qiquy ZHU 45

Performance evaluation of svoc emitted from materials and products using thermal desorption test chamber method
Kunihiro HOSHINO, Shinan KATO, Qiquy ZHU and Yui ATAKA 53

Measurement of svocs emitted from various kinds of indoor materials by thermal desorption test chamber method
Hiroko KATSUMATA, Shunto MURAKAMI, Shinan KATO, Kunihiro HOSHINO and Yui ATAKA 61

Benefits of non-isothermal task conditioning system in office
Takashi AKIMOTO, sueng-jae LEE and Shin-ichi TANABE 67

Indoor climate of a large enclosure with under floor return air system in heating condition Cld simulation coupled with heat capacity of building structure and hvac control
Tetsuji YASUTOMO, Mingjie ZHENG and Yasushi KONDO 75

Proposal of the t-x basis and the t-jh basis heating design weather data
Kimiko KOHRI and Hisaya ISHINO 83

Examination on a production method of cooling design weather data based on solar radiation A study on a production method of design weather data for heating and air-conditioning using two weather indices part 3
Kimiko KOHRI and Hisaya ISHINO 89

A study on assuring the safety of computer systems at the wide-area disaster in the inner city district of tokyo
Yukihiro MASUDA and Toshio OJIMA 95

Quantification of temperature distribution inside and over building canopy by the schliemten method
Yasutobu ASHIE and Toshio ABE 103

Research on the cooling effect by the water film formation on the surface of an outer coated with the super-hydrophilic photocatalyst
Hiroshi NAGANUMA, Tatsuo OKA, Harushia SYUDO and Kazuki SATO 109

Measurement research on environmental mitigation effect of plant canopies with different plant species and the stratification
Shoko HASHIDA, Hiroshi OHMORI, Yoh MATSUO and Hajime KOSHIMIZU 117

Accelerated algorithm of anti-aliasing at 3 dimensional computer graphics
Shinichi KASAHARA 123
