Analytical study on strength and deformation behavior of confined concrete
......................................................Takashi HIRAIIWA, Yasuo TANIGAWA, Hiroshi MORI and Kousuke KAWATO
Fracture properties of high-strength lightweight aerated fiber reinforced concrete
......................................................Yoichi NISHIYUKI, Yasuhiro TAKAHASHI and Masahiro YOSHIIKA
Experimental study on rheological properties of dense suspension by shear box test
......................................................Naoki MISHIMA, Yasuo TANIGAWA, Hiroshi MORI, Yoshizumi KUBOKAWA, Keni-ichi TERADA and Tohshiro HATTORI
Development of damage test apparatus by traffic for car deck waterproofing membranes
......................................................Kyoji TANAKA, Eiji KAGAWA and Hiro.yski MIYAA.}
Experimental study on the improvement of precision in the thermography method by the subtraction processing
......................................................Tadashi NISHIKAWA, Akihiko HIRANO and Eiji KAMADA
Study on the relative evaluation method of slipperiness of flat and inclined floors and pavements from a view point of straight mobility of wheelchairs
......................................................Noboru ONO, Junko IDOGAWA and Hiroki TAKAHASHI
Development of landing slip meter and presentation of lower criterion of c.s.r. Study on evaluation of floor slipperiness when people step on slippery surface without knowledge of slipperiness changing part 2
......................................................Yutaka YOKOYAMA, Kenhiko ITO, Hori HI. KAKASHI and Hidenori ONO
On tactile perceptibility of tactile warning blocks and their placing conditions
......................................................Takamasa MIKAMI, Shinji AMANO, Nakaya WATARAI and Eiji SAKAI
On the term controlled by snow load: practical use of snow sliding on pitched roof
......................................................Masahiro TAKAKURA, Takahiro CHIBA, Toshiyuki ITO and Tatsuki TOMABEOCHI
A study on seismic design syntheses by considering ductility responses of stiffness and strength asymmetric frame structures
......................................................Tadahiko YAMASHITA, Yoichi MIKAI and Yutaka INOUE
Role of increased damping with viscoelastic dampers in seismic design of buildings
......................................................Satsuya SODA and Yoji TAKAHASHI
Simultaneous identification of stiffness and damping of building structures using limited earthquake records
......................................................Mitsuru NAKAMURA, Isuru TAKAWAI, Yusuru YASU and Koji UETANI
Vibration isolation system for buildings using helical spring units and viscoelastic dampers
......................................................Masayoshi TAKAI, Shinji FUJII and Satsuya SODA
On a non-linear finite element analysis procedure based on hierarchical digital image for concrete materials with consideration of coarse-aggregate-and-mortar interface
......................................................Gakujir NAGAI, Takahiro YAMADA and Akira WADA
Topology optimization of compliant mechanisms using the homogenization design method
......................................................Dajii FUJII, Susumu EJIMA and Noboru KIKUCHI
Efficient analysis of plastic hinge locations of building frames using total quantity expressions
......................................................Koji UETANI, Isuru TAKAWAI, Masahiro OKADA and Masaaki TSUJI
Minimum cost analysis of semi-rigidly connected steel frames considering cost of joints
......................................................Shinya MATSUMOTO, Yasuo KASUGA, Daji FUJII and Yoshinobu FUJITANI
Effects of shear reinforcement on structural performance of rc beam with horizontal joint and shear transfer in the connection
......................................................Katsuhiro NAKANO and Yasuo MATUSAKI
Estimation of the damping ratio for pedestrian vibrations of reinforced concrete floor slabs
......................................................Masayoshi ITO, Satoru Ito and Takeyoshi UEMATSU
Seismic performance of rc buildings during hyogo-ken nanbu earthquake
......................................................Yasuhiro HAYASHI, Junichi MIYAKOSHI, Akira TASA and Yoshiteru OHNO
Shaking table test on earthquake response behavior of steel moment resisting frames with yielding joint panel
......................................................Takashi HASEGAWA
Elasto-plastic behavior of compression members laterally-braced at an intermediate point and bracing requirements
......................................................Hidetoshi FUKAI and Shusuke MORINO
Resistance factor of src members in limit state design
......................................................Yasuhiro UCHIDA and Shosuke MORINO
Crack of steel tube and plastic deformation capacity of concrete filled steel tube column
......................................................Motoo SAISHO and Teruo MATUSYAMA
Connection between concrete-filled square steel tubular column and steel beam reinforced with internal diaphragm -Elasto-plastic behavior of the local connection
......................................................Toshiyuki FUKUMOTO and Koji MORITA
The evaluation of earthquake damage potential for administrative district based on social living statistical indexes
......................................................Tadashi SEIKE and Naoto TAMA
Simulation of tidal currents and diffusion taking into density stratification around very large floating structures
......................................................Kyoichi OKAMOTO, Takeshi ONO and Osamu SAJO
A study of displacement control method for one lumped mass rc models Part 1 changing method for member sections
......................................................Kazutoshi TSUTSUMI and Karuhiro KOMON
