An experimental study on flexural behaviors of extruded cementitious components with hollow
−Mibh MAKATAYAMA, Akih BARA, Akiko MORI, Masatoshi HOSIGUCHI and Tsugumichi WATANABE

Experimental study on effects of flocculation of cement and liquefaction on rheological properties
of fresh mortar
−Naoki MISHIMA, Yasuo TANIOWA, Hiroshi MORI and Yoshiyuki KUROKAWA

Characteristics of motion-induced wind forces during coupled across-wind and torsional vibration
Motion-induced wind forces acting on rectangular high-rise building with side ratio of 2
−Jangi KATAGIRI, Takeshi OHKUMA, Hisao MARUKAWA and Toshibi TSURUMI

Probabilistic evaluation of target earthquake-resistant level derived from requirements of users
For better indication of performance reflecting user’s needs
−Kyoko HIRATA and Takahide ISHIKAWA

A study on impact loads of the sliding snow from the roof
−Tatsuya KOTAKE, Tatsuo TOMAE and Kaoru NISHIKAWA

Statistical characteristics of seismic ground motions estimated from k-net records and green's function
synthesis for semi-empirical method
−Shigeo ITOH, Hiroshi KUHARA and Hiroshi KAWASE

Proposal of slim column structure controlled with viscoelastic dampers and structural design method
−Takanori SATO, Tatsumi ISHII, N. SHAO and Akuya NISHIMURA

Source rupture process reflecting fractal heterogeneity on the fault plane and ground motion
−Koshibo EN and Masahiro KAWANO

Evaluation of source, path, and site amplification factors from the k-net strong motion records
of the 1997 kagoshima-ken-hokusai earthquake
−Kenichi KATO

Study on seismic force intensity indices to evaluate building responses and damage
Investigation by using a simple formula to predict building responses
−Hiroshi KAMBARA and Yasuharu HAYASHI

Constitutive rule for viscoelastic materials considering temperature, frequency, and strain sensitivities
(Part 1 linear model with temperature and frequency sensitivities)
−Kanako KASAI, Michihiko TERAMOTO, Kiyoshi OKUMA and Ken TAKAKO

Simulation analyses of a pile supported re-building damaged due to the 1995 hyogoken-nanbu earthquake
−Masayuki HASEGAWA, Masamori MORI, Misao FUCHIMOTO and Yoshiharu ASAKA

Causes of confusing the data of damage wooden-buildings by the 1923 kanto earthquake
−Masayuki TAKEMURA and Takafumi MOROI

Filtering method for topology optimization analysis using optimality criteria method
−Daiji FUJII, Katsuyuki SUZUKI and Hideomi OHTSUKI

Behavior of an earth retaining structure for excavation by the sakauchi method
(Part 2 behavior of a soil cement wall)
−Satoru KAZAMA

Hysteresis model and stiffness evaluation of bracket complexes used in traditional timber structures
based on static lateral loading tests
−Koichi FUJITA, Masahiko KIMURA, Yoshimizu OHASHI and Isao SAKAMOTO

Numerical model to predict the 3-dimensional characteristics of reinforced concrete l-shaped shear walls
Part II “verification of the model”
−Yasuyuki ARAI, Mitsu SHIGUCHI, Masaki KOJIMA and Masatoshi NAKAI

The effects of amount of prestressing steels and bond-slip characteristic between prestressing steel
and grout on response of prestressed concrete frame structure
−Ichiro KISHIMOTO and Yoshihiro OHNO

Experimental study on the behavior of combined joints using fillet weldings and high strength bolts
−Hiroshi MASUDA, Hideharu JINBO, Atsuo TANAKA and Takashi UZKI

On mechanism of x-braced frame with hysteretic damper and its elasto-plastic behavior
(Part 2) shear connected braced frame
−Hiroyuki TAMAI, Kazuo KONDOH and Masami HANAI

Elasto-plastic analysis for local buckling behavior of circular tubes under axially cyclic loading
−Nobuyuki YASUI

Post-buckling behavior of thin plates under in-plane shear
−Mamoru KIMURA, Tatsushi OGAWA and Hideki SHIMIZU

Seismic response and collapse analysis of concrete filled steel tube frame
−Motoki SAISHO

Study of earthquake risk assessment by regional vitality evaluation
Part 1 economic vitality evaluation
and a case study in heavy damaged region by the 1995 hyogoken-nanbu earthquake
−Keichi TANABE and Sumio NAGAHASHI

Discussion on research activity published as “the ultimate strength of reinforced concrete columns
using half precast square tube concrete form by centrifugal casting under compression,
bending and shear”
−Katsuki TAKIGUCHI

The authors’ answers to the discussion by prof. katsuki takiguchi
−Kimiya HAMADA, Yasuaki NAKANISHI and Keiichi MINAMI
