JOURNAL OF STRUCTURAL AND CONSTRUCTION ENGINEERING
(Transactions of AIJ)

March 2004 Number 577

Study on the fluidity and properties of high-fluidity concrete using portland blast-furnace slag cement and fly ash
Yoshiaki MIYAMOTO and Yasuhiro YAMAMOTO

Estimation method for mechanical properties of hardened cement composites cured in varying temperatures
Norio ITO, Hirozo MIHASHI and Kazuki KIRIKOSHI

Evaluation of steel corrosion in existing concrete members using calculation method for macrorcell corrosion rate
Nobuki OTSUKI, Takahiro NISHIDA, Shinichi MIYAZATO and Koichi SOEDA

Quantity of carbon dioxide emission by the intermediate processing of the construction waste
Toshiyuki FUKUDA, Masafumi KIKUCHI, Akio KOYAMA and Yoshihiro YAMAGUCHI

Evaluation of dynamic property and seismic performance of low-and mid-rise rc buildings based on microtremor measurement
Nareemandula HO and Hiroshi KAWASE

Displacement control method of base-isolation system using variable damping device
Ichiro NAGASHIMA, Ryota MASEKI, Hiroshi HIRINO and Masayoshi TAKAKI

System identification of rocking vibration of a slender seismically isolated building using earthquake response records
Satoshi KURITA, Manabu TOYOSHIMA, Motojiro MOOTOHASHI and Yoshihiro SUGIMURA

Mechanism of horizontal subgrade reaction of pile during soil liquefaction based on pile top vibration tests
Shoji TAMURA and Ken'ichi KOBAYASHI

Simulation analyses of piled raft foundations subjected to horizontal load
Toshiaki NAGAO, Fumio KUWABARA, Haruo KOBAYASHI and Toru WATANABE

Shape functions of a cylindrical shell strip with arbitrary cross section obtained by adopting numerical integration method and their application to linear analyses
Mitsuki AKAGI and Yoichi MINAKAWA

Compressive properties of reinforced concrete columns using high strength concrete with compressive strength of 100-180m/\text{mm}^2
Tsutomu KOMURO, Kazumasa IMAI, Akissaga MURAMATSU, Takeyoshi KORENAGA and Fumio WATANABE

Experimental study on reinforced concrete beam with all lapped splices in beam depth way at the critical region, using u-shaped precast beam
Ratsubish NISHIMURA, Hiroaki ETO, Shuji TAKAMI and Kazumasa OSUMI

Seismic retrofit design of rc columns with spandrel walls utilizing pre-tensioned high strength steel bars and steel plates
Tetsuo YAMAKAWA and wencong LJ

Hysteresis model for reinforced concrete beams and columns subjected to shear failure after flexural yielding
Hideyoshi WATANABE, Takeyoshi KORENAGA and Yasuhiro MATSUKA

Shear crack controll by lateral prestress on reinforced concrete column and evaluation of shear strength
Hiroshi WATANABE, Shigeru KAWAI, Keichi KATORI, Yasu SHINOHARA and Shizuo HAYASHI

Braced frame model considering buckling and fracture and its responses under near-fault strong motions
Iori KAWAO, Masayoshi NARASHIMA and Sohei TAKEHARA

Dynamic response of steel beam-columns with square hollow section
Shaking table tests of steel beam-columns subjected to biaxial bending (part 1)
Yasuhiro UCHIDA, Jun KAWAGUCHI and Shouke MORINO

Study on hysteretic damping and deformation profile along the height of reinforced concrete box shaped wall buildings
Hinariro HIRAISHI, Hiroaki MOOTOHASHI and Tadashi KIMURA

Seismic response and ultimate earthquake resistant capacity of concrete filled steel tube frame
Motoo SAISHO

Hydroelastic behavior of a floating elastic circular plate advancing in waves Part I theoretical formulation and analytical solution
Tetsuya MATSUI

Damage rates of various kinds of structures except for wooden-houses in tokyo metropolis during the 1923 kanto earthquake and theire relationships to the seismic intensity
Masayuki TAKEMURA
