Properties of concrete using molten slag fine aggregate recycled from the domestic wastes
Takeshi SAITO, Hirotake IKENAGA and Akira NEMOTO

Measurement method of the reflection coefficient in the diagonal electromagnetic wave by the parallel wire line
Shinji KAWABE, Tetsuo IKEDA and Dapeng WANG

Study on the carbonation suppressive effects of concrete considering the aging of coating materials
for textured finishes
Masanori KONO, Yoshihiro MASUDA, Ryota OCHIAI and Tomoyuki KARASAWA

Imaging analysis of relationship between pore structure and permeability of cl" in hardened cement paste
Kiyotomi KURUMISAWA and Koyo TANAKA

Experimental study on impact of execution effort of concrete ground work on floor quality and maintenance work
Yutaka YOKOYAMA and Shin'ichi NISHITANI

Effect of surface properties on the visual evaluation of building stone finishing Part 2 influence of surface shape on visual evaluation of natural sandstone
Jun TSUCHIYA, Yoshihiko KITSUTAKA and Masaki TAMURA

Seismic response analysis of three-dimensional alluvial valleys based on the riccati method in generalized coordinates
Satoshi MATSUDA, Masahiro KAWANO and Koichiro ASANO

Estimation of dynamic response of elasto-plastic sdof systems by wavelet coefficients Relationship between discrete wavelet transform of seismic waves and input energy part 2
Jun IYAMA

Investigation on destructive power indices of strong ground motions using building damage data and strong ground motion records by the 1994 northridge, California, earthquake
Yuki SAKAI and Yukiko NAKAMURA

A study on estimated ground motion and building damage at mihara-city during the 2001 geyo earthquake
Takeshi MORII and Yasuo HAYASHI

A study on possibility of rc passive response control system with pin-jointed mainframe Dimension of continuous columns and characteristics of devices installed in each story required to avoid story collapse
Hisato HOTTA and Takeshi NAKAI

Classification of deformation components and expression of displacements in stress terms for beams with narrow rectangular section
Koichiro HEKI

Experimental studies on an arch stiffened by cables
Ming R. WU, Hirotsugu KOMATSU and Mutsuo SASAKI

Numerical method for post-buckling behaviors on a system truss by using finite element method
Toku NISHIMURA, Kensei ODA and Yoyokata MORISAKO

Analysis of the effect of geometric imperfections on the structural properties of hyperboloid rc cooling towers —Evaluation of the limit state of the observed imperfect system—
Atsushi MUTOH, Kengo HANAI, Takayuki FUNASAKI and Shiro KATO

A study on estimation of stiffness factor based on earthquake response characteristics of wooden-framed houses
Akira YAMADA, Sanhiro SUZUKI and Koichiro ASANO

Buckling strength of timber hybrid column reinforced with steel plates and carbon fiber sheets —Part 1 experimental study on timber hybrid column reinforced with steel plates and carbon fiber sheets—
Tetsuro ONO, Hiroshi TANAKA, Hideki IDOTA and Kazuto ISHIHARA

Experimental study on mechanical behavior of glulam timber-steel composite member using shear-ring connector
Takeshi MORII, Hiroyasu SAKATA, Toru TAKEUCHI, Tatsuro SUZUKI and Hiroshi NAKAMURA

Earthquake response analysis in large deformation range on west building of mukoage junior high school collapsed by 1995 kobe earthquake
Kozo TSUMURA

Experimental study on seismic retrofit method for rc building considering the torsional deformation at beam end
Toshiba MUKAI, Yoichi ISHIDA, Takumi ISHII, Toyonobu TANAKA, Kenzuke IDO and Haruyuki KITAMURA

Development of a simplified shaking table test method for reinforced concrete structures using ultra small-scaled models Reproduction of restoring force characteristics of reinforced concrete members by ultra small-scaled models
Yuki SAKAI, Noriko TAKAI, Yasushi SANADA, Naruhiko YAMAUCHI, Yoshiaki NAKANOKA,
Haruhiko SUWADA and Hiroshi FUKUYAMA

Experimental study for load-deformation characteristics of precast prestressed flexural members with unbonded tendon and mild steel
Isao KOHIZU, Ryo KITOKI, Satoshi MIZUTANI and Keicho SUITA

Experimental study on dynamic response characteristics of steel frame incorporated with lead damper into beam splice
Kikuo IKARASHI and Yasuaki HASHIMOTO

Buckling behavior and maximum strength of squarre thin plates in nonlinear material range
Kenji SAKINO, Yutaka UEDA and Toko HITAKA

Experimental study on overturning moment-resisting structural wall with steel hysteretic dampers
NII-Electronic Library Service
