Study on mechanism of strength distribution in vacuum processed concrete based on the consolidation theory .............................................................. Shigemitsu HATANAKA, Hiroki HATTORI, Eisuke SAKAMOTO and Naoki MISHIMA 1

Evaluation of wind resistance performance of clay tile roof based on survey of construction method and pulling-up tests ..................................................................................................................... Hisashi OKADA and Hitomitsu KIKITSU 9

Valuation for practical use of s-wave velocity structure determined by the spatial auto-correlation method applied for microtremors ................................................................. Seiji TSUNO and Kazuyoshi KUDO 17

Two-dimensional fourier analysis of shapes of concrete crack surfaces formed under several stress modes Analytical study on frequency characteristics of concrete crack surfaces part 2 ...................................................... Ryosuke SATO, Toshinaga WADA and Masaaki UEEDA 25

A practical method for estimating causal hysteretic damping —Simple approximate expression of complex damping in time domain— ........................................................................... Naohiro NAKAMURA 33

Analysis of behavior of a cylindrical-shape cantilever earth retaining structure, as affected by wall temperature variations (Part 2 stress interaction between reinforcing bars in rc earth retaining wall and those in the underground structure wall) ................................................................................... Satoru KAZAMA and Toshio KUMAGAI 41

Response evaluation of lattice domes supported by elasto-plastic substructures .................................................. Toru TAKEUCHI, Toshiyuki OGAWA, Akiko NAKAMA and Tomohiko KUMAGAI 49

Response evaluation of cylindrical lattice shell roofs with supporting substructures ........................................... Toru TAKEUCHI, Toshiyuki OGAWA, Chika YAMAGATA and Tomohiko KUMAGAI 57

Experimental study on dynamic characteristics of hybrid wooden model floors ................................................................. Shuzo SUZUKI, Eichi FUJINO, Hiroaki NOGUCHI and Hiroshi ISODA 65

Uniaxial compression fcm analysis of cylindrical concrete with strength variation due to bleeding ................................. Yukio YOSHIDA, Eiji MIZUNO and Shigemitsu HATANAKA 71

Substructure pseudo dynamic test of existing rc buildings with soft story incorporating response control elements ............................................................................................................................ Kazunori IWABUCHI, Hiroshi FUKUYAMA, Haruhiko SUWADA and Manabu YOSHIMURA 79

A method of estimating earthquake responses of asymmetric reinforced concrete structures based on nonlinear deformation modes .................................................................................................. Toshikazu KABEYASAWA and Toshimi KABEYASAWA 87

Development of hinge isolated reinforced concrete beams with web opening at plastic hinge area .......................... Hisahiro HIRAISHI, Munenori YAMADA, Ryohi SAITO and Ryosuke MAKI 95

Prediction of seismic response of single-story unsymmetric buildings using equivalent sdof model and its applicability ................................................................................................................. Kenji FUJI, Yoshiake NAKANO, Yasuo SANADA, Hiroyasu SAKATA and Akira WADA 101

Structural behaviours of h-section weak axis column to h-section beam connection with high strength bolts .............................................................. Kazunaka EBATO, Atsushi NOMOTO, Yukihiro HARADA and Koji MORITA 109

Experimental study on evaluation of defects at the end zones of weld in beam-to-column joints by ultrasonic angle beam testing technique .............................................................. Motohiro KASHARHA, Tadato NAKAGOMI and Ko MATOBA 117

Effect of strength and stiffness eccentricity of hysteresis damper on seismic performance of damage tolerant structure .............................................................................................................................. Satoshi YAMADA, Kenji FUJI, Tomoko WADA and Akira WADA 125

Experimental study on joint of seismic retrofitting brace for steel structure using shear-key plate adhered to concrete slab Yasushi ICHIKAWA, Tsubotomo OKAYASU, Hiroshi NAKAMURA, Satoshi YAMADA and Akira WADA 133

Strength of cft connections stiffened by t-shaped interior diaphragms ................................................................. Ryosuke KANNO, Nobutaka SHIMIZU, Yasumi SHIMURA, Hironaka SHIMAHLAKI and Toshikazu ICHINOSE 141

Inelastic behavior of steel reinforced concrete columns with cross-shaped steel subjected to axial and cyclic flexural loading.............................................................................................. Li LI, Junichi SAKAI and Chiaki MATSUI 151

The estimation of the s-wave velocity structure by microtremor observations on the suwa basin ................................. Shinichiro TAMORI and Takahiro HIRANO 159
