JOURNAL OF STRUCTURAL AND CONSTRUCTION ENGINEERING (Transactions of AIJ)

January 2006 Number 599

Study on compressive strength and internal organization with binder using low-heat portland cement and silica fume .................................................. Hiroshi KAWAKAMI, Yoshikatsu NISHIMOTO and Yoshihiro MASUDA 1

Study on the prediction formula for time-dependent strain of concrete —Prediction formula of total creep strain— .................................................. Yoshiaki SATO, Chizuru KIYOHARA, Keichi IMAMOTO, Kohji TERANISHI, Hiroto MIHASHI and Yasuhito HAMANAGA 9

Characteristics of separated shear layers above a cube and pressure fluctuations on the roof in a turbulent boundary layer ........................................... Shinji ITO, Yasuo ORUDA, Masamiki OHSASHI, Hiromitsu KIKITSU, Tetsuro TANIGUCHI and Yoshihiko TANIKE 17

Effective arrangement of passive control systems in structures considering complex modal characteristics ........................................................................ Hiroki KAZAMA and Akira MITA 23

Identification of the frictional coefficient of the metal-touched type of base-isolator and verification of its response reduction ........................................ Harumi NISHIMURA, Shoko ABE and Elizaburo TACHIBANA 29

Vibration control of buildings by connecting different stories using rocking and lever mechanism .................................................. Fuming ZHANG 35

Analytical study for damage to under construction cast-in-place concrete pile subjected to lateral spreading during the 1995 Hyogoken-nambu earthquake .................. Kohji KOYAMADA, Kohji TOKIMATSU and Yuji MIYAMOTO 43

Proposal and verification of modeling of the surface layers for strong motion prediction .......................................................... Hirohito TAKAHASHI and Nobuo FUKUWA 51

Analytical methods for viscoelastic damper considering heat generation, conduction, and transfer under long duration cyclic load ........................................... Karashiko KASAI, Daiki SATO and Yuma HUANG 61

Energy balance-based seismic response prediction method for response controlled buildings using hysteretic dampers .......................................... Haruyuki KITAMURA, Kazuyuki ZAITSU and Tomoe MAYAHARA 71

The effect of geometrical nonlinearity on the buckling load of laminated rubber bearings .................................................. Isao NISHIMURA 79

Structural design based on a numerical design method and sensitivity analysis of optimum designs of buildings .................................................. Koji IKAGA, Makoto YAMAKA and Koji UETANI 87

Simplified estimation of earthquake-induced settlements in clay deposits ........................................................................ Tadashi TAMURA and Yasuhiro SHAMOTO 95

Study on seismic performance of wood-framed residential structures by full-scale test .................................................. Kazuto WATAHAKI, Kenichi MACHIDA, Yoshimitsu OHSASHI and Isao SAKAMOTO 103

Influence of the maximum bearing force distribution to the ultimate horizontal load and maximum displacement response of traditional timber houses ............................................. Koji YAMADA 111

Study on seismic diagnosis for wooden structures —Comparison between seismic diagnoses, and relationship between evaluation and damage level— .................................. Chikaiko TABATA and Yoshimitsu OHSASHI 119

Seismic performance evaluation based on structural testings for precast reinforced concrete low-rise housing of wall-building system ........................................... Takeshi KAWAMOTO, Hiroshi KURAMOTO and Junji OSAKI 127

A study on the relationship between maximum response and cumulative response for seismic design ........................................... Tatsuya MIYAKE 135
