および *Rhene setipes* ŽABKA, 1985 について

Abstract Two salticid spiders, *Bavia sexpunctata* (DOLESCHALL, 1859) and *Rhene setipes* ŽABKA, 1985, are newly recorded from Japan. The genus *Bavia* is new to the Japanese fauna. The female of *Rhene setipes* is described for the first time.

After an examination of the materials obtained from Iriomotejima Island, Okinawa Pref., Japan, the author recognized the occurrence of *Bavia sexpunctata* (DOLESCHALL, 1859) and *Rhene setipes* ŽABKA, 1985, in the island. These species are new to the Japanese fauna, and will be redescribed in the present paper.

*Bavia sexpunctata* was originally described by DOLESCHALL (1859) from Ambon. Then it has been revealed by many authors to be widely distributed from Sumatra to New Guinea (THORELL, 1878, 1881, 1890, 1892; KOCH, 1879; HASSELT, 1893; SIMON, 1899; STRAND, 1911; REIMOSER, 1927). The present author collected some specimens of this spider in a meadow by the sweeping method. The genus *Bavia* has never been recorded from Japan.

*Rhene setipes* was described from Viet-Nam by ŽABKA (1985) on the basis of the male holotype. The author could collect two females and one male in a forest by the beating method. The female of the species will be described for the first time in the present paper.

Before going further, the author wishes to express his hearty thanks to Dr. Hirotsugu ONO, National Science Museum (Nat. Hist.), Tokyo, for his constant guidance and revising the manuscript of this paper.

*Bavia sexpunctata* (DOLESCHALL, 1859)
(Figs. 1–7)

*Salticus sexpunctatus* DOLESCHALL, 1859, p. 24 [male holotype (?) from Ambon, deposited in Rijksmuseum van Natuurlijke Historie, Leiden (?), not examined].

*Marptusa sexpunctata*: THORELL, 1878, p. 224; 1881, p. 444; 1892; KOCH, 1879; HASSELT, 1893; SIMON, 1899; STRAND, 1911; REIMOSER, 1927. The present author collected some specimens of this spider in a meadow by the sweeping method. The genus *Bavia* has never been recorded from Japan.

*Rhene setipes* was described from Viet-Nam by ŽABKA (1985) on the basis of the male holotype. The author could collect two females and one male in a forest by the beating method. The female of the species will be described for the first time in the present paper.

Before going further, the author wishes to express his hearty thanks to Dr. Hirotsugu ONO, National Science Museum (Nat. Hist.), Tokyo, for his constant guidance and revising the manuscript of this paper.

pace 1.97–2.09. Abdomen length/width 2.19–2.28. Epigynum and internal genitalia as shown in Figs. 3–4.

Male. Carapace length/width 1.21. Length of eye field/length of carapace 0.57, eye field length/width 0.87, width of eye field III/width of eye field I 1.03, distance between eye field I and II/distance between eye field II and III 0.86, width of eye field III/width of carapace 0.79. Thoracic furrow longitudinal. Chelicera with 4 promarginal and 7 retromarginal teeth. Labium length/width 1.32, sternum length/width 1.52. Length of leg I/length of carapace 2.53. Male palp as shown in Figs. 5–7. Abdomen length/width 2.20.

Coloration and markings. Female. Carapace dark brown, surroundings of eyes black. Leg I dark brown, except light brown tarsus, legs II, III, IV light brown; palp light brown with dorsal dark brown line. Abdomen light brown, with numerous small dark brown spots and three pairs of larger ones.

Range. Sumatra (Thorell, 1892; Hasselt, 1893; Simon, 1899; Reimoser, 1927), Buru (Thorell, 1881), Amboina (Doleschall, 1859; Thorell, 1878), Banda (Strand, 1911), Aru (Thorell, 1881), Palau (Koch, 1879), New Guinea (Thorell, 1881), Japan (new record; Iriomotejima Island).

(Scale: 0.5 mm.)
Two Salticid Spiders from Japan

Rhene setipes ZABKA, 1985
(Figs. 8–14)

Description (based on the Japanese specimens). Measurement (in mm). Body length ♀ 4.30–4.65, ♂ 4.25; carapace length ♀ 1.91–2.15, ♂ 2.13, width ♀ 1.89–2.20, ♂ 2.05; abdomen length ♀ 2.45–2.63, ♂ 2.43, width ♀ 1.80–2.37, ♂ 1.78. Length of legs of 1♂ from Iriomotejima Island as shown in Table 2.

Female. Carapace length/width 0.98–1.01. Length of eye field/length of carapace 0.73–0.77, eye field length/width 0.70–0.75, width of eye field III/width of eye field I 1.48, distance between eye field I and II/distance between eye field II and III 0.26, width of eye field III/width of carapace 1.02–1.04. Thoracic furrow longitudinal. Chelicera with 2 promarginal and 1 retromarginal teeth. Labium length/width 1.31–1.35, sternum length/width 1.59–1.71. Length of leg I/length of carapace 1.85–1.86. Abdomen length/width 1.11–1.36. Epigynum and internal genitalia as shown in Figs. 10–11.

Male. Carapace length/width 1.04. Length of eye field/length of carapace 0.70, eye field length/width 0.70, width of eye field III/width of eye field I 1.48, distance between eye field I and II/distance between eye field II and III 0.23, width of eye field III/width of carapace 1.04. Thoracic furrow longitudinal. Chelicera with 2 promarginal and 1 retromarginal teeth. Labium length/width 1.25, sternum length/width 1.59–1.71. Length of leg I/length of carapace 2.04. Male palp as shown in Figs. 12–14. Abdomen length/width 1.37.

Coloration and markings. Female. Carapace dark brown, darker in front, surroundings of eyes black. Abdomen pale brown, with dark brown markings.

Male. Carapace dark brown, darker in front, surroundings of eyes black. Abdomen reddish brown, with dark brown and pale brown markings.

Range. Viet-Nam (ŻABKA, 1985), Japan (new record; Iriomotejima Island).
