Greetings

Masao Saitou, PHD.
Honorable Adviser of The Biophilia Rehabilitation Academy
Emeritus Professor of Tokyo University,
Professor of Tokyo Denki University

Many supporters got together due to sympathizing with the zeal of Mr. Takizawa who had hoped for the elderly to live a full and vigor life.
An individual technique is in the limelight to receive public subsidies.
To develop into the academy from the volunteer's meeting is an evident.
I advised him to extend the scope of the research he established by a one-time public grant. It is a pleasure for me that the research has expanded to people of various fields like I said.
The Journal became annual based on two proceedings of J-STAGE by Japan Science and Technology Corporation. I admitted that this academy had been approved as an academic society.
And also, I have advised to evaluate the result on objectivity and quantitatively.
Please try to evaluate the effects absolutely and calmly with keeping one's own zeal inside in order to improve the academy 's level, at the same time to extend the scope of the research.
I am hoping for progress of this movement.
