Early this year Mr. Takizawa contacted the CNMI Assistive Technology Project with the desire to share information, research and invention of the experts of the Biophilia Rehabilitation Academy of Japan and with the intent of helping people with disabilities in the Commonwealth. Since November is celebrated annually in the CNMI as Assistive Technology Awareness Month, one thing led to another and the idea of an International Conference was born.

This conference will be the first ever International Conference on Assistive Technology and Biophilia Rehabilitation here in the US Commonwealth of the Northern Mariana Islands. The CNMI Council on Developmental Disabilities Assistive Technology Project, Biophilia Rehabilitation Academy of Japan and various organizations, agencies, presenters and individuals made this conference possible. There will be sessions and site tours of the different centers and agencies that provide services to people with disabilities during the pre-conference. In the general sessions, there will be a lot of concurrent sessions that will be presented by different experts on assistive technology and rehabilitation. Also there will be a Scientific Symposium on Rehabilitation that will be presented by the experts from the Biophilia Rehabilitation Academy of Japan. Some local and off-island presenters will also join them in this symposium.

In addition, this conference will give you opportunities to see different types of assistive technology devices from the different vendors in the CNMI and also from off-island vendors as well as different Assistive Technology services from our public and private local service providers.
