Greetings

Raoul Saggini

Director of the Medical Postgraduate School in Physical And Rehabilitation Medicine

President of the Degree Course in Physiotherapy

"Gabriele d'Annunzio" University Chieti- Pescara Italy

In the field of the motivated exercise that deals with neurological rehabilitation, nowadays more and more techniques and instruments has been developed that features characteristic of fine neuro-sensorial and peripheral stimulation.

Aim of this workshop expressed by an international work group will be to demonstrate how the integration in scientific and technological knowledge could porta to a shared rehabilitative protocol with specific effects on spinal cord, sub cortex and cortex measurable trough the international measurement scale and the variation of the tonic postural system.

The experience of this work group wants to show how multidisciplinary integration and the correct use of new rehabilitative methods could be a useful supplement to the traditional rehabilitative programs in the post stroke patients.
