Since we gained a new research grant from the Ministry of Internal Affairs and Communications, we reported the details of research last year. The name is as the notation, and the purpose of research and development is systems development which is based on the local ICT organization in Kanagawa prefecture. We researched and are developing the system which can manage autonomous rehabilitation in the whole region and an institution at remoteness by information and communications technology (ICT) due to the device development for the motivative exercise of the leg.

In this argument, we would like to discuss the international field study of the developing device.
