Editor’s Message to Special Issue on Embedded Systems Engineering

HIRONORI NAKAJO¹,a)

Embedded systems support our social life and industries as “brains” in a wide variety of electronic products such as automotive vehicles, home appliances, industrial equipment, telecommunication, and IoT devices. Research and development for these systems require innovative ideas to integrate overall technologies from hardware to software, from fundamentals to applications since embedded systems have to realize new services and features under severe physical and economic constraints. Establishing and advancing the embedded system engineering is crucial not only to develop better products but to keep the competitiveness of industries. Although Japan allegedly has some strength in embedded system industry, overseas research activities for embedded systems, mainly in Europe and the U.S., have rapidly progressed, and a large number of outcomes have been published. It is critical to vigorously promote research in universities and research institutions in Japan.

In this special issue, we called for papers from industry and academia on a broad range of areas including hardware and software technologies, project managements, and human resources and educations related to embedded systems. Especially, we encouraged to submit papers presented in “Embedded System Symposium (ESS),” which is sponsored by Special Interesting Group on Embedded Systems in Information Processing Society of Japan.

The number of the submitted papers is 13 and 5 excellent papers have been accepted. Each paper was assigned to a meta reviewer selected from the 22 editorial committee members shown below to conduct peer-reviewing.

We should accelerate to establish embedded system technologies through collaboration between industry and educational institutions. Since the special issues activate the collaboration, we plan to continue publishing them twice a year.

We would like to express our sincere appreciation to all the authors and reviewers for their contribution in spite of a short reviewing period.

The Editorial Committee

• Editor in-Chief:
  Hironori Nakajo (Tokyo University of Agriculture and Technology)

• Deputy Chief Editors:
  Kiyofumi Tanaka (Japan Advanced Institute of Science and Technology)
  Kenji Hisazumi (Kyushu University)

• Editorial Committee Members:
  Takuya Azumi (Saitama University)
  Masato Edahiro (Nagoya University)
  Takeshi Ohkawa (Tokai University)
  Masao Ohira (Wakayama University)
  Kouichi Ono (IBM Research – Tokyo)
  Jun Kanai (TOSHIBA CORPORATION)
  Kenji Kise (Tokyo Institute of Technology)
  Takashi Kitamura (National Institute of Advanced Industrial Science and Technology)
  Mitsugu Suzuki (Shimane University)
  Yoshinori Takeuchi (Kindai University)
  Kenji Tei (Waseda University)
  Natsuko Noda (Shibaura Institute of Technology)
  Mikio Hashimoto (Toshiba Electronic Devices and Storage Corporation)
  Eiichi Hayakawa (Takushoku University)
  Hiroki Fukuda (Shibaura Institute of Technology)
  Hiroki Matsutani (Keio University)
  Yutaka Matsubara (Nagoya University)
  Takanori Yokoyama (Tokyo City University)
  Yasutaka Wada (Meisei University)
