INFORMATION FOR AUTHORS

Members of the International Society of Chromosome Botany (ISCB) are encouraged to submit manuscripts pertinent to chromosome botany and closely related disciplines for publication in Chromosome Botany. Acceptance of papers for publication depends on merits as judged by each of two or more referees. Members of ISCB are allowed to publish their original articles; however, members are encouraged to contribute to the cost of these pages. Authors should acknowledge this policy and the availability of funds when the manuscript is submitted to the editor.

Authors should adhere to the following guidelines; manuscripts not so prepared may be returned for revision prior to review. The publication uniformity used in the most recent issue of Chromosome Botany should be followed. Submit all manuscripts prepared by the electronically attached file by the Microsoft Office Word 2003, using 12 point of Time New Roman font. Double space all manuscripts throughout, including all parts of titles, authors’ names and addresses, abstract, text (including heads and keys), acknowledgments, literature cited, tables (separate form text and with heading beginning first page of each), and figure captions (consecutive paragraphs, each with the figure numbers and a plate title before individual figure titles, on one or more pages separate from figures themselves). Arrange parts of manuscript in order just given. Avoid footnotes and do not break words at ends of lines. Make table headings and figure captions self-explanatory, not merely descriptive. Plan tables and illustrations carefully to be informative without wasting space. Proofs and reprint order forms are sent to authors by the Editorial Office. Authors send corrected proofs to the Editor-in-Chief.

Authors are encouraged to consult the editor for early assistance with any aspect of manuscript preparation.

Copyright The copyright for the articles published in Chromosome Botany will be transferred to the ISCB.

Editor-in-Chief Katsuhiko Kondo, Institute of Evolutionary Biology, 2-4-28 Kamiyouga, Setagaya-Ku, Tokyo 158-0098, Japan.
