Abstract of Original Papers

CLINICAL AND PATHOLOGICAL FINDINGS OF A FATAL CASE OF ACUTE SUPPURATIVE OTITIS MEDIA COMPLICATED WITH CEREBELLAR ABSCESS AND PETROSITIS.

By

K. Nagakura, and M. Hesaka

*(From the Department of Otorhinolaryngology (Professor I. Sato)
Zikeikai Medical School.*

In spite of using 7,500,000 Units of Penicillin the patient died of cerebellar abscess complicated with petrositis derived from otitis media purulenta acuta. We reported of the clinical and pathological studies of this interesting case.

HAEMANGIOMA OF NASAL CAVITY AND ACCESSORY SINUS.

By

H. Ogura

*From the Otorhinolaryngological Department, Medical Faculty,
University of Tokyo.)*

The author reported 3 cases of tumor developed in the nasal cavity and the accessory sinus; one case being haemangioma cavernosum, two cases belonging to gemmangioma. These tumors are called in Japan "*ketsuryushu*" (haemangioma in broader sense) according to Dr. Tadokoro; but besides this clinical diagnostic nomenclature, it is appropriate to designate these two kinds of tumors in accordance with a histopathological diagnosis.

This paper is accompanied with a statistic consideration of 110 cases on record in the Japanese literature.
