In Shikoku, I collected specimens of this plant in fruit on July 24, 1887, at Nishin-mura in the province of Ashi.

In fruit, Pollens 5, swollen on the back, spathigly hairy, at least smooth and glossy. 1 line long and 1 line broad.

In fruit, Pollens 5, swollen on the back, spathigly hairy, at least smooth and glossy. 1 line long and 4 lines broad. Calyx-lobes persistent, deltoid, partlet or crenate-patent.

Branchlets: pedicles 3-4 lines long. In fruit, Calyx-lobes persistent, deltoid, partlet or crenate-patent.

Calyx-lobes, persistent, deltoid, partlet or crenate-patent. The under surface; pedicles 3-4 lines long. Calyx-lobes, persistent, deltoid, partlet or crenate-patent. The upper, prominent on the lobed, 1/4-1/2 inches long, 2-8 lines broad; veins reticulated, depressed on the upper, prominent on the surface of leaves, pedicles, peduncles, and calyx somewhat obovate-rhomboidal, cuneate at the base, subacute at the apex, inciso-denticulate, sometimes somewhat 3-lobed, oblong-obovate, obtuse at the base, subacute at the apex, inciso-denticulate, sometimes somewhat 3-lobed, obovate-obovate, obtuse at the base, subacute at the apex, inciso-denticulate.

Leaves of leafy, pedicels, peduncles, and calyx somewhat obovate-obovate, obtuse at the base, subacute at the apex, inciso-denticulate.

Young shoots, under a dwarf shrub with a dark purplish-brown bark, intricately much branched. Young shoots, under a dwarf shrub with a dark purplish-brown bark, intricately much branched.

No. 72.

This variety differs from the type chiefly in the form of the leaves. My specimens of the type in fruit collected on Mt. Ibuki have, besides broader leaves, longer pedicels and more patent calyx lobes.
