Contents

Ecological study of living planktic foraminifera by culture experiments
Katsunori Kimoto and Atsushi Matsuoka...1

Paleoenvironmental change off Kashima of central Japan during the last 144,000 years based on planktonic foraminiferal assemblage
Yasushi Niimura, Tomohisa Inui and Tadamichi Oba...4

Significance for the high-resolution environmental reconstruction by using IMAGES (International Marine Global Change Study) cores collected in the western Pacific
Hodaka Kawahata, Hiroshi Nishi and Toshikake Maruyama...18

Environmental change in the western Pacific during the late Quaternary - Deglaciation to Holocene -
Hodaka Kawahata, Azumi Kuroyanagi and Kayo Minoshima...21

Reconstruction of paleoceanographic changes based on the relationship between planktonic foraminiferal assemblages and water masses off Shimokita over the last 27,000 years
Azumi Kuroyanagi, Hodaka Kawahata and Ken'ichi Okuishi...33

Dynamic changes of the surface and intermediate waters in the Ryukyu Arc region during the past ~250,000 years: based on planktonic and benthic foraminiferal analyses of two IMAGES cores.
Yurika Ujiie and Hiroshi Ujiie...43

Late Quaternary tephr stratigraphy of two IMAGES cores taken from the off Shikoku in the Northwest Pacific
Minoru Ikehara, Masafumi Murayama, Osamu Tadai, Natsumi Hakanishi, Nobuhiro Daido, Hodaka Kawahata and Hisato Yasuda...60

Learning from the life of Endo Riuji
Michiko Yajima...77

The Proboscidea fossil which represents Japan -Naumann's Elephant (Palaeoloxodon naumannii) -
Yoichi Kondo...81

Fossa Magna Museum Fossil Research Group
Yutaka Furumi and Yousuke Ibaraki...88

Proceedings...94
