Contents

Discovery of a skeleton of the *Hydrodamalis* sea cow from the Lower Pleistocene Iimuro Formation, Komae City, Tokyo, central Japan
Naoki Kohno, Daigoro Takashi and Eiichi Kobayashi

Biofacies and environmental change in the Japan Sea -Past, present and to the future
Kazutaka Amano, Takuya Itaki and Toshikazu Iriuki

The Omma-Manganji fauna and its temporal change
Kazutaka Amano

Relationship between Pliocene ostracode assemblages and marine environments along the Japan Sea side regions in Japan
Toshikazu Iriuki and Katsura Ishida

Faunal changes of cryophilic ostracods (Crustacea) in the Japan Sea, in relation to oceanographic environment: an overview
Hirokazu Ozawa

Historical changes in the Pliocene foraminiferal fauna in the Japan Sea oil-field region and its paleoceanographic implications
Satoshi Hanagata

Radiolarian assemblage and environmental changes in the Japan Sea since the Late Miocene
Shin-ichi Kamikuri and Isao Motoyama

Historical changes of deep-sea radiolarians in the Japan Sea during the last 640 kyrs
Takuya Itaki

The cause of the temporal changes in the Tsushima Current during interglacial periods in the late Pliocene-early Pleistocene Japan Sea -reexamination of the early Pleistocene occurrences of the planktonic foraminifer *Globoconella inflata*
Akihisa Kitamura

Late Pliocene climate change in the middle to high latitude region of northern hemisphere as seen from calcareous nannofossil assemblages
Tokiaki Sato

Formation of deep-sea fauna and changes of marine environment in the Japan Sea
Shigekazu Koyama, Kenro Akachi and Yasumi Kusumoto

Responses of the lower trophic level ecosystem of the Japan Sea to the North Pacific decadal variation in the latter half of the 20th century
Sanae Chiba

International Geoscience Programme (IGCP) and contribution to the world
Hiromichi Hirano

Proceedings
