In this paper, it was attempted to bring the pathologically formed minerals into focus. The wider variation of mineral species in the pathological calcifications expresses the more complicated mechanism of mineralization than in the normal. Several examples of the pathological calcifications were presented and pathogenic minerals were reviewed briefly.

Pathological Calcifications – Another Form of Biomineralization
Toshiro Sakae (Nihon University School of Dentistry at Matsudo)

Keywords: abnormal calcification, phosphates, carbonates, oxalates, citrates, organic matter
