“Bulk Metallic Glass-Forming Region of Four Multicomponent Alloy Systems”

Ailong Zhang, Ding Chen and Zhenhua Chen

In the above paper, a mistake was discovered after publication. The first sentence of the corrected abstract is as following:

We have evaluated the predictive ability of a simple method combining the efficient cluster packing model of metallic glasses proposed by Miracle, chemical mixing enthalpy and the normalized configurational entropy S_{config}/R in rapidly locating the bulk metallic glass (BMG)-forming composition region, in four multicomponent alloy systems.
