Corrections to "Triggering of Some Earthquakes"

To my paper "Triggering of Some Earthquakes", Proc. Japan Acad., Vol. 40, pp. 410-415 (1964), corrections should be made as follows:

Page 411, equations (1) and (2) should read respectively

$$\Theta_{\theta}^b = \lambda \Delta^b + 2\mu(\xi^2 G_2 - 2F_2) \alpha^2 S_2^b(\theta^b) + 2\mu F_2 \alpha^2 S_2^b(0) \quad (1)$$

$$\Phi_{\varphi}^b = \lambda \Delta^b + 2\mu \xi^2 G_2 \alpha^2 S_2^b(\theta^b) - 2\mu F_2 \alpha^2 S_2^b(0). \quad (2)$$

Page 412, equation (5) should read

$$\Theta_{\theta}^b - \Phi_{\varphi}^b = 6\mu \alpha^2 F_2 f M^b (D^b)^{-3} \sin^2 \theta^b, \quad (5)$$

and the remainder of the paragraph following equation (5) should be deleted. Also delete last sentence of the next paragraph as equations (4) and (6) are not identical unless $\theta^m = \theta^s$.

From the middle of p. 412 to the middle of p. 413 the following corrections should be noted. For the Anchorage earthquake both lateral normal stresses were compressive and very small at shallow depths. The error in equation (5) induces errors in the last column of the table at the bottom of p. 412. In view of the smallness of the shallow stresses involved, delete this last column and ignore references to tidal tensile stress in the associated paragraph.
