The Journal of Reliability Engineering Association of Japan
Vol.27 No.8 November
2005
Contents

Preface
On the Occasion of the Special Issue on
"Earthquake-proof Safety in Daily Life Infrastructure"
................................................................................. Tsuyoshi SAITO ..........565

Special Survey
"Earthquake-proof Safety in Daily Life Infrastructure"
Earthquake Hazard Mitigation and Strong Ground Motion Prediction
................................................................................. Masayuki YOSHIMI ..........566
Aseismic Technology and Safety of Buildings
................................................................................. Masaaki SARUTA ..........573
Damage to the Cranes and the Seismic Design
................................................................................. Seiji TAKANASHI ..........577
Countermeasures for Earthquake Disasters of Tokyo Gas
................................................................................. Kenichi NABANA ..........585
Seismic Safety of Railway Facilities in Japan
................................................................................. Yoshitaka MURONO ..........592

Review
Turning point of management technology: Re-engineering of the Japanese MONO-DUKURI
It is necessary to improve even to CMMI® level 5 .......... Ryuzo KANEKO ..........601

Report
Visiting Report of REAJ .................................................. Takuya FUSE ..........612

From Editor ................................................................. Secretariat of REAJ ..........619

Published by Reliability Engineering Association of Japan
